Preface

At **Boris Dental Lab** our team is dedicated to providing both digital and conventional workflows that are dependable and predictable for our customers. We understand the importance of creating lasting partnerships based on trust and excellence.

But we're more than just a dental laboratory. Our skilled technicians and customer support staff are always available to answer your queries and provide invaluable advice. You can also count on the expertise of our clinical advisor for additional support related to prosthodontic and implant cases.

1. Diagnostics

Visualise Excellence with Digital Smile Design and Wax Up Services

Our Digital Smile Design and Wax-up services are transformative tools that empower patients in their treatment decisions, fostering understanding and encouraging case acceptance through a clear visualization of high-quality dental outcomes.

Digital Smile Design

Digital Smile Design (DSD) is a revolutionary service we offer that is designed to empower dentists in treatment planning and communication with patients. It utilizes modern technology to create an ideal smile design based on a comprehensive facial analysis and the principles of the golden ratio.

DSD provides a unique opportunity to visualize the potential outcome of a treatment, allowing patients to see the transformative potential of their smile even before they commit to the procedure. This approach enhances patient understanding, engagement, and satisfaction.

Additionally, DSD can be used to facilitate a multidisciplinary approach in practice, streamlining communication and collaboration among various dental specialists involved in a patient's treatment plan. This leads to more effective and efficient treatment processes, ultimately benefiting both the patient and the dental practice.

Wax Ups

Wax-ups are an invaluable tool in the world of dentistry, allowing both dentists and patients to see a three-dimensional model of the proposed restorative or cosmetic dental enhancements prior to treatment.

At Boris Dental Labs we provide high-quality wax-ups that serve as a precise blueprint for the anticipated dental work. It allows patients to visualize their treatment outcome, helping them understand and appreciate the transformation their smile can undergo.

For dentists, our wax-ups provide a practical guide for preparation and a reference for final restorations. It offers a comprehensive view of the proposed treatment, facilitating better planning and execution. This ensures a smoother procedure and improved accuracy, leading to superior patient satisfaction.

In essence, our wax-ups are not just models, but a bridge between the present state and the desired outcome, making the journey towards a perfect smile a shared vision between the dentist and the patient.

4. Implantology

We are at the forefront of digital dentistry, harnessing the power of technology to push the boundaries of Implantology. We offer a comprehensive range of implant solutions centred on the balance of aesthetics, function, and longevity, meticulously designed to meet the diverse needs of your patients.

Our commitment to precision and innovation allows us to provide groundbreaking, highly accurate solutions. By integrating digital workflows into our process, we ensure an exceptional level of fit and aesthetics for each implant restoration.

From single tooth restoration to full-arch rehabilitation, we focus on delivering restorations that not only function optimally but also enhance the patient's appearance, confidence and healing. At Boris Labs every implant restoration is a testament to our dedication to precision, aesthetics, digital innovation, and patient comfort.
